Windows systems are almost completely immune to the types of infections listed above, but make sure to follow the instructions on the download page of your browser to ensure the file is not corrupted before installing it. This seems like an endless game. For each virus, for each worm, there is at least one defense. As you might imagine, this is an area where antivirus companies are making a fortune. If you're reading this, you're definitely interested in trying to defend your computer against malware. Like any other computer user, you've probably tried buying a piece of software or a series of downloads online to help you fend off this stuff, but every now and then, there is a truly powerful way to completely eliminate malware. Software updates and patches are probably the most obvious way to protect your computer from malware. While they are all important, it's also important to keep in mind that updates don't always contain the latest and greatest security fixes. Fortunately, it is possible to find and install patches for your software online. Here are two sites I found useful: And lastly, just use common sense. Don't go downloading other people's files and don't go to sites that ask for personal information. You can use your browser's built-in settings and security options to protect your computer, and follow the instructions of your browser's installation wizard. It's easy to do and it's always safer than downloading stuff off the Internet. If you want to try and block malware yourself, there are a number of programs available that can do this. The process is called "sandboxing" and essentially, it involves installing an application and then opening it as if it is a program you want to run. This will prevent the program from using any of the information on your computer before it is fully checked for problems. In order for this to work properly, the software has to be designed to work this way. If it does not, you are probably looking at a program that is designed to cause damage or steal your information. Malwarebytes Anti-Malware (MBAM) is one of the best 82157476af
